SOLANA MOBILE / CLOCK IN

Passersby

Walk past another Seeker.
Both phones remember.

THE PROBLEM

A Seeker between airdrops is a paperweight.

> ”useless paperweight”
>
> Seeker owner, x.com/hammerfrog64/status/2014458973861396633

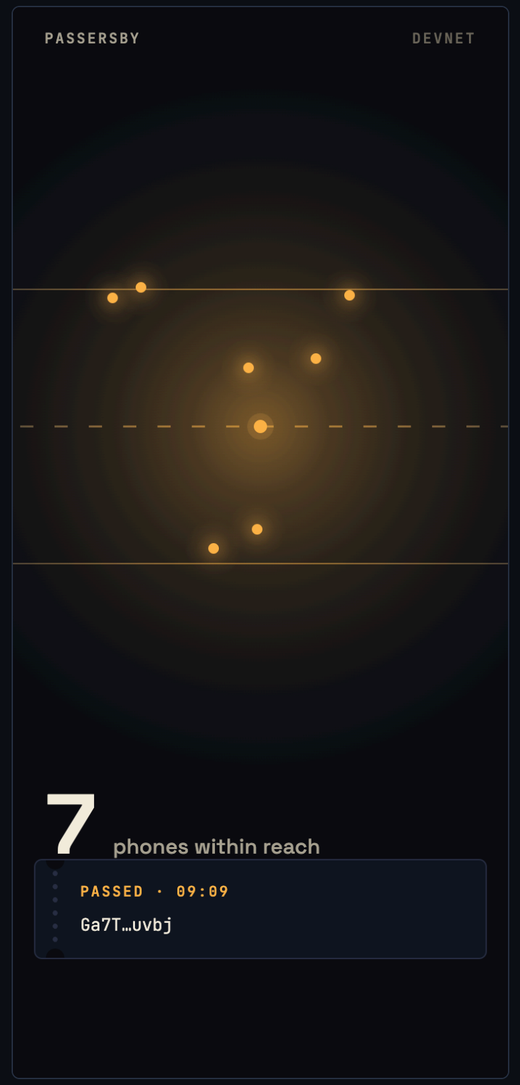

The phone has little reason to be opened. Meanwhile every crypto social graph is **farmable from a laptop**.

THE IDEA

StreetPass for Seekers.

Phones that pass each other on the street record the crossing on Solana.

Only a phone in a pocket can do this.

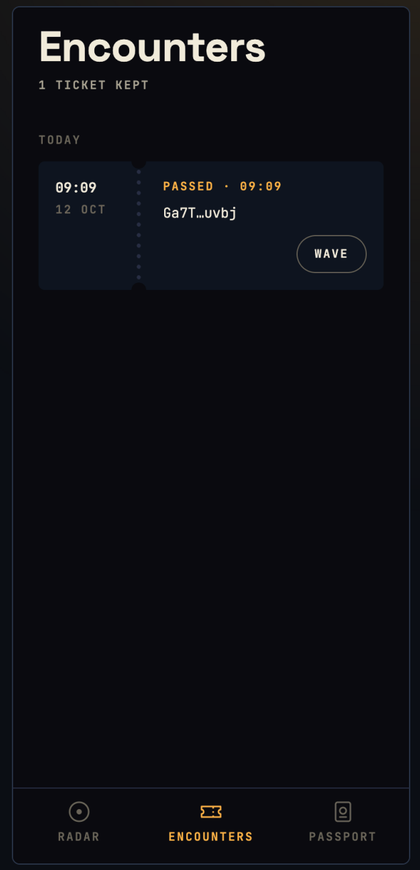

THE PRODUCT

Three screens. One walk.

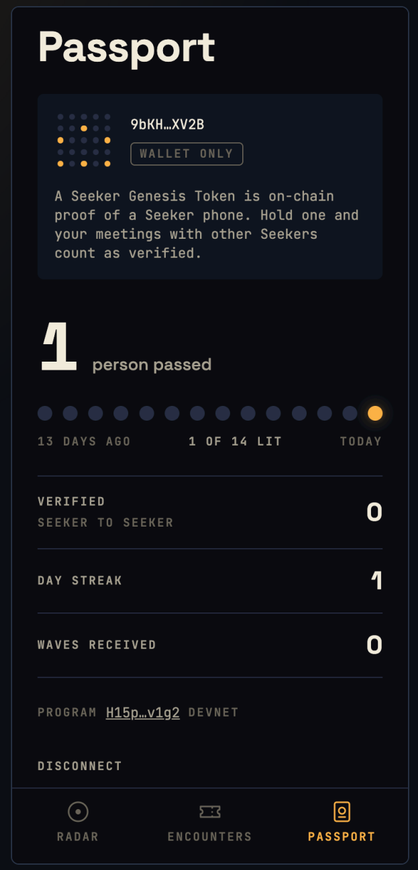

RADAR

A STREET AT NIGHT. EVERY PHONE WITHIN REACH IS A WARM DOT UNDER YOUR LAMP.

TICKET ENCOUNTERS

EACH CROSSING IS A STUB YOU KEEP, WITH A WAVE ACTION.

PASSPORT

YOUR NIGHT LOG: COUNT, STREAK, 14 LAMPS.

HOW IT WORKS

Five steps from a hallway to a chain account.

1

Broadcast

A native Kotlin module advertises a rotating Bluetooth LE token: an HMAC of identity and the 5-minute epoch, manufacturer id `0xFFFF`.

2

Listen

Phones report what they hear to the server. A one-way sighting never counts.

3

Match

Both phones heard each other. The server signs an `Ed25519` attestation.

4

Relay

The server relays `record_encounter` to the Solana program.

5

Record

The program writes `Encounter` at `["encounter", lo, hi, day]`, one per pair per day, and updates both streaks.

WHY SEEKER

One Genesis Token per device. One crossing, two real phones.

The Seeker Genesis Token is one per device, so a verified encounter is **two distinct phones in one place**. An in-person graph that can’t be faked from a laptop.

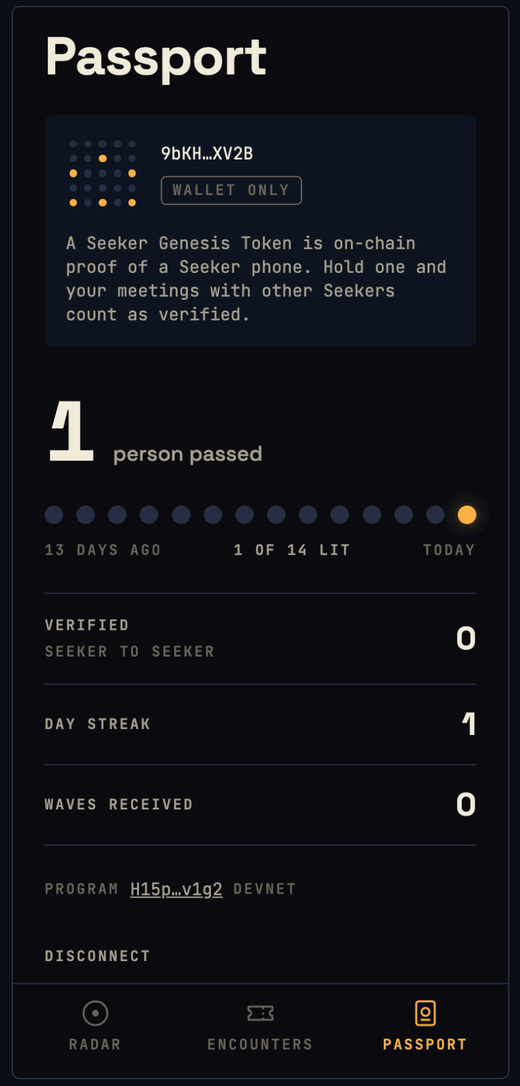

SKR WITH PROOF

You can only wave at someone you passed.

Waving sends SKR. The program checks the signer is named on the encounter, so every wave has a crossing behind it.

The daily return loop: **streaks** and the **14-day lamp row**.

PROOF IT RUNS

End to end on devnet.

DEVNET PROGRAM

H15pvqJFh7isY3fMX4oZe2ezZ8xjM4RZmv2uemQhv1g2

LIVE SERVER

passersby-api.fly.dev

ONE-WAY SIGHTING

Did not confirm

MUTUAL SIGHTING

Confirmed in about 2 seconds

READ BACK FROM CHAIN

Encounter + both Profile accounts

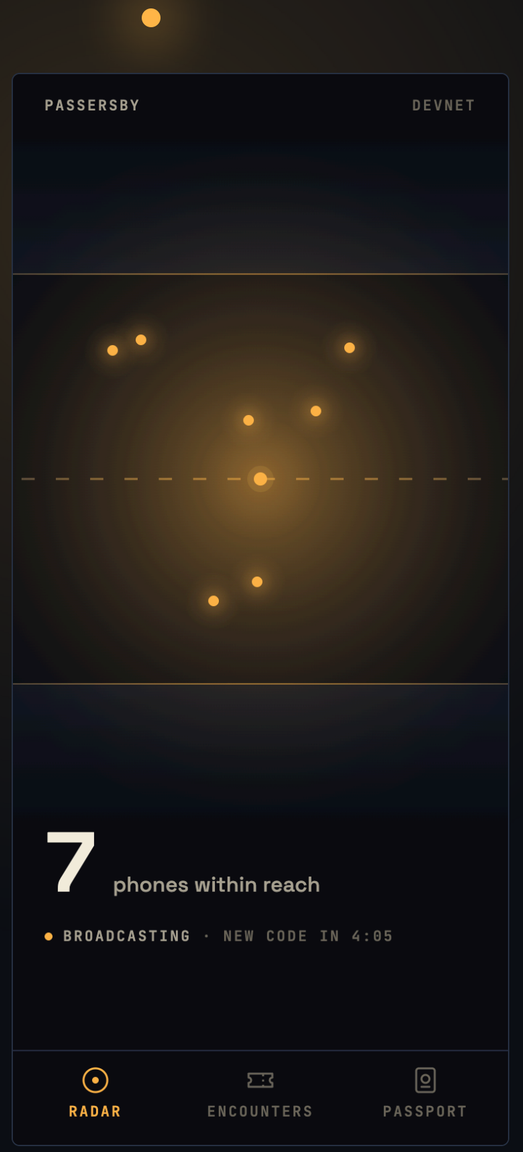

TESTS, MUTATION-TESTED

14 program, 15 server

LAUNCH

Ships to the Solana dApp Store.

Built for meetups, hacker houses and Breakpoint, where **Seekers fill one room**. Every room is a street.

Every crossing counts.
