Passersby

Walk past another Seeker. Both phones remember.

A Seeker owner, on X

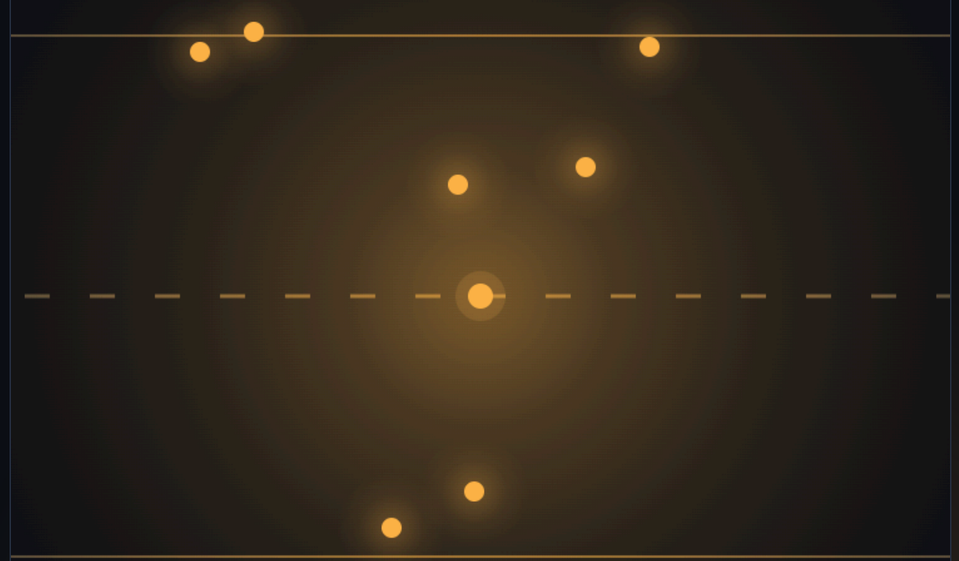

“useless paperweight.”

@hammerfrog64 / x.com/hammerfrog64/status/2014458973861396633

Every crypto social graph farms from a laptop.

StreetPass for Seekers.

Phones that pass each other on the street record the crossing on Solana.

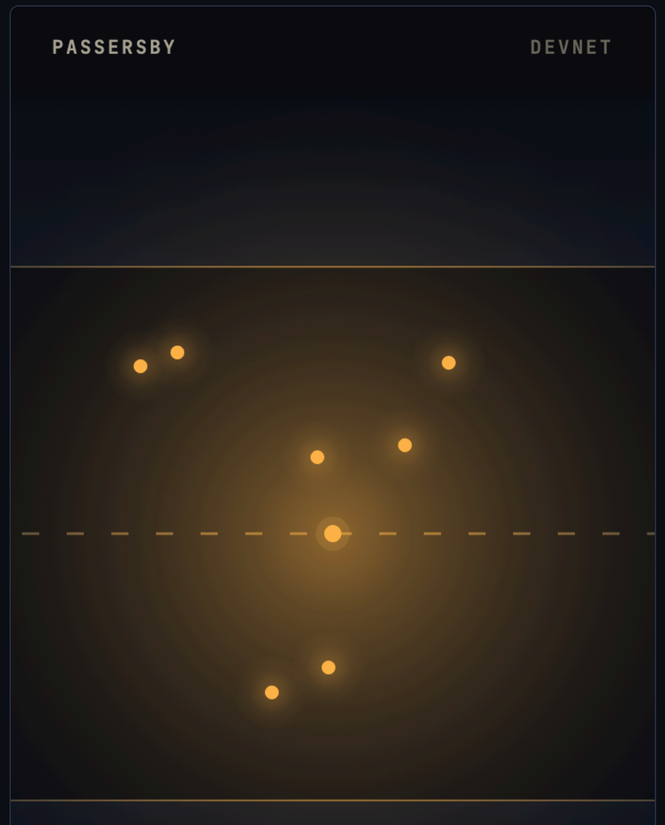

7 phones within reach

PASSED · 09:09

Ga7T…uvbj

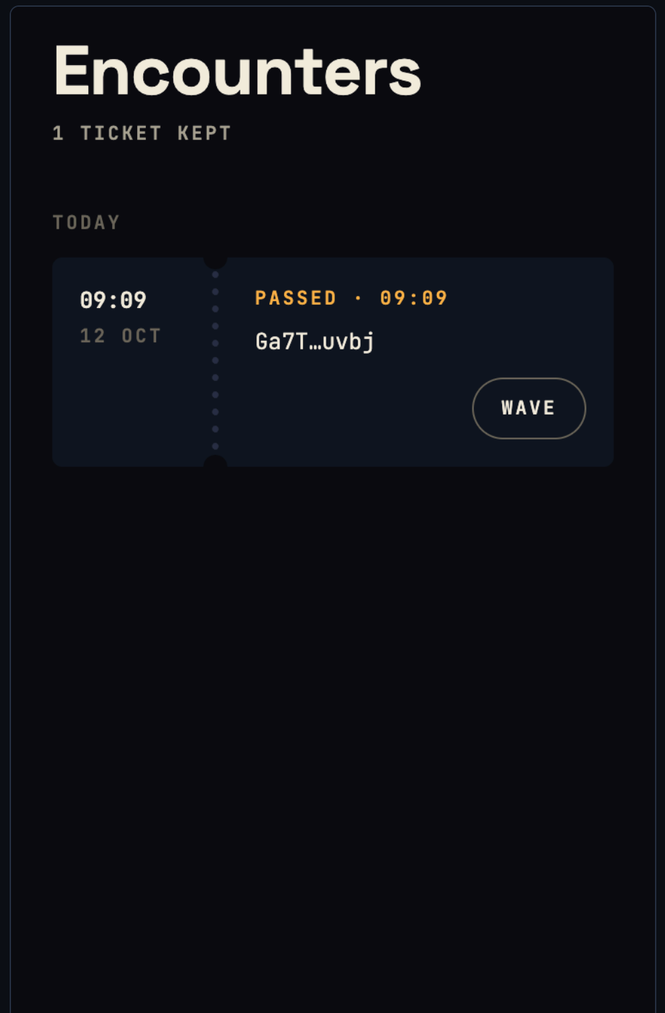

Radar

A street at night. Every phone in reach is a warm dot under your lamp.

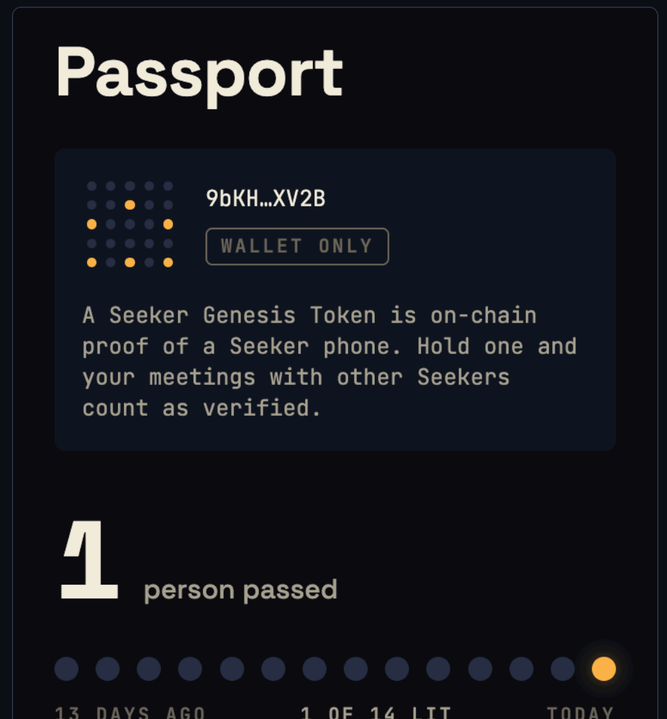

Ticket

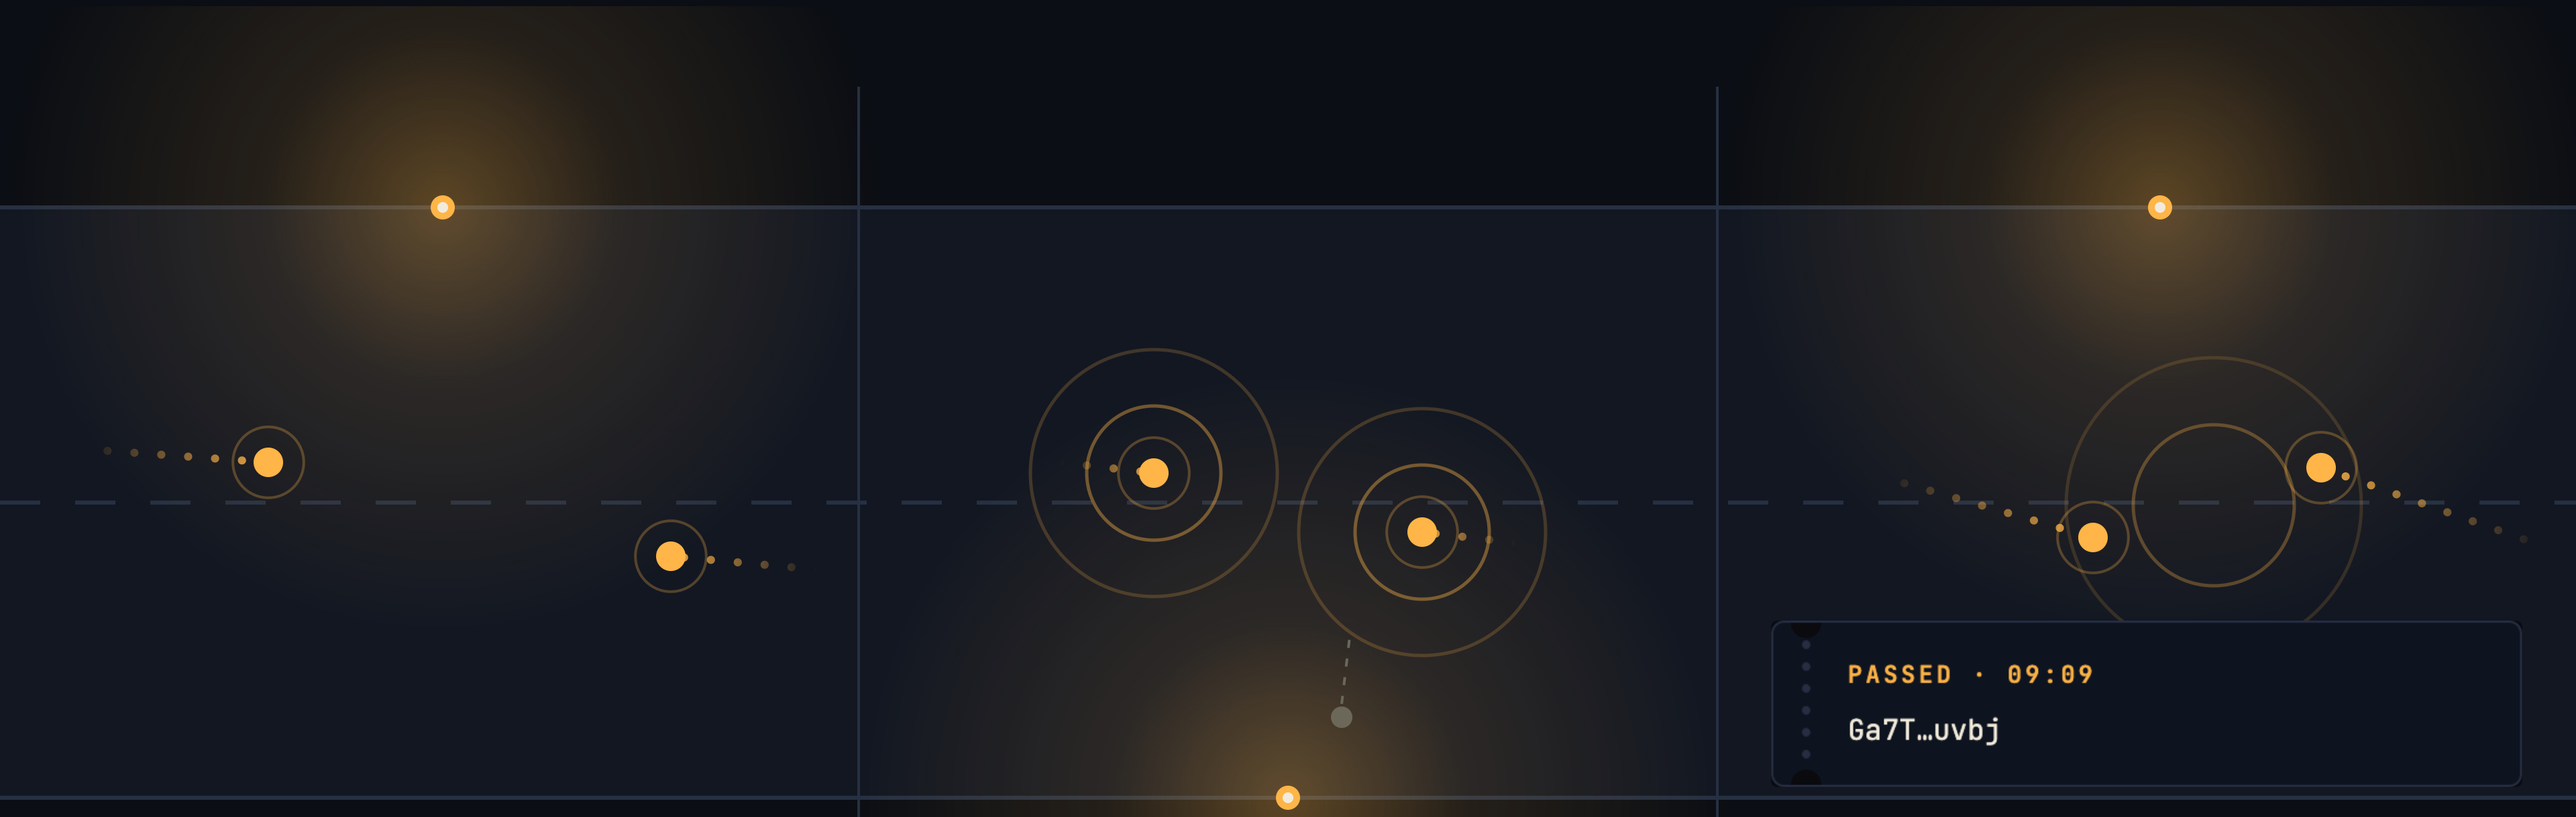

Each crossing is a stub you keep, with a WAVE.

Passport

Your night log: count, streak, 14 lamps.

Approach

Two phones walk the same street, each under its own lamp.

Hear

Each hears the other's code. It rotates every **5 minutes**. A one-way sighting never counts.

Record

A mutual sighting is signed and recorded on Solana. **One per pair per day.**

A ticket you keep.

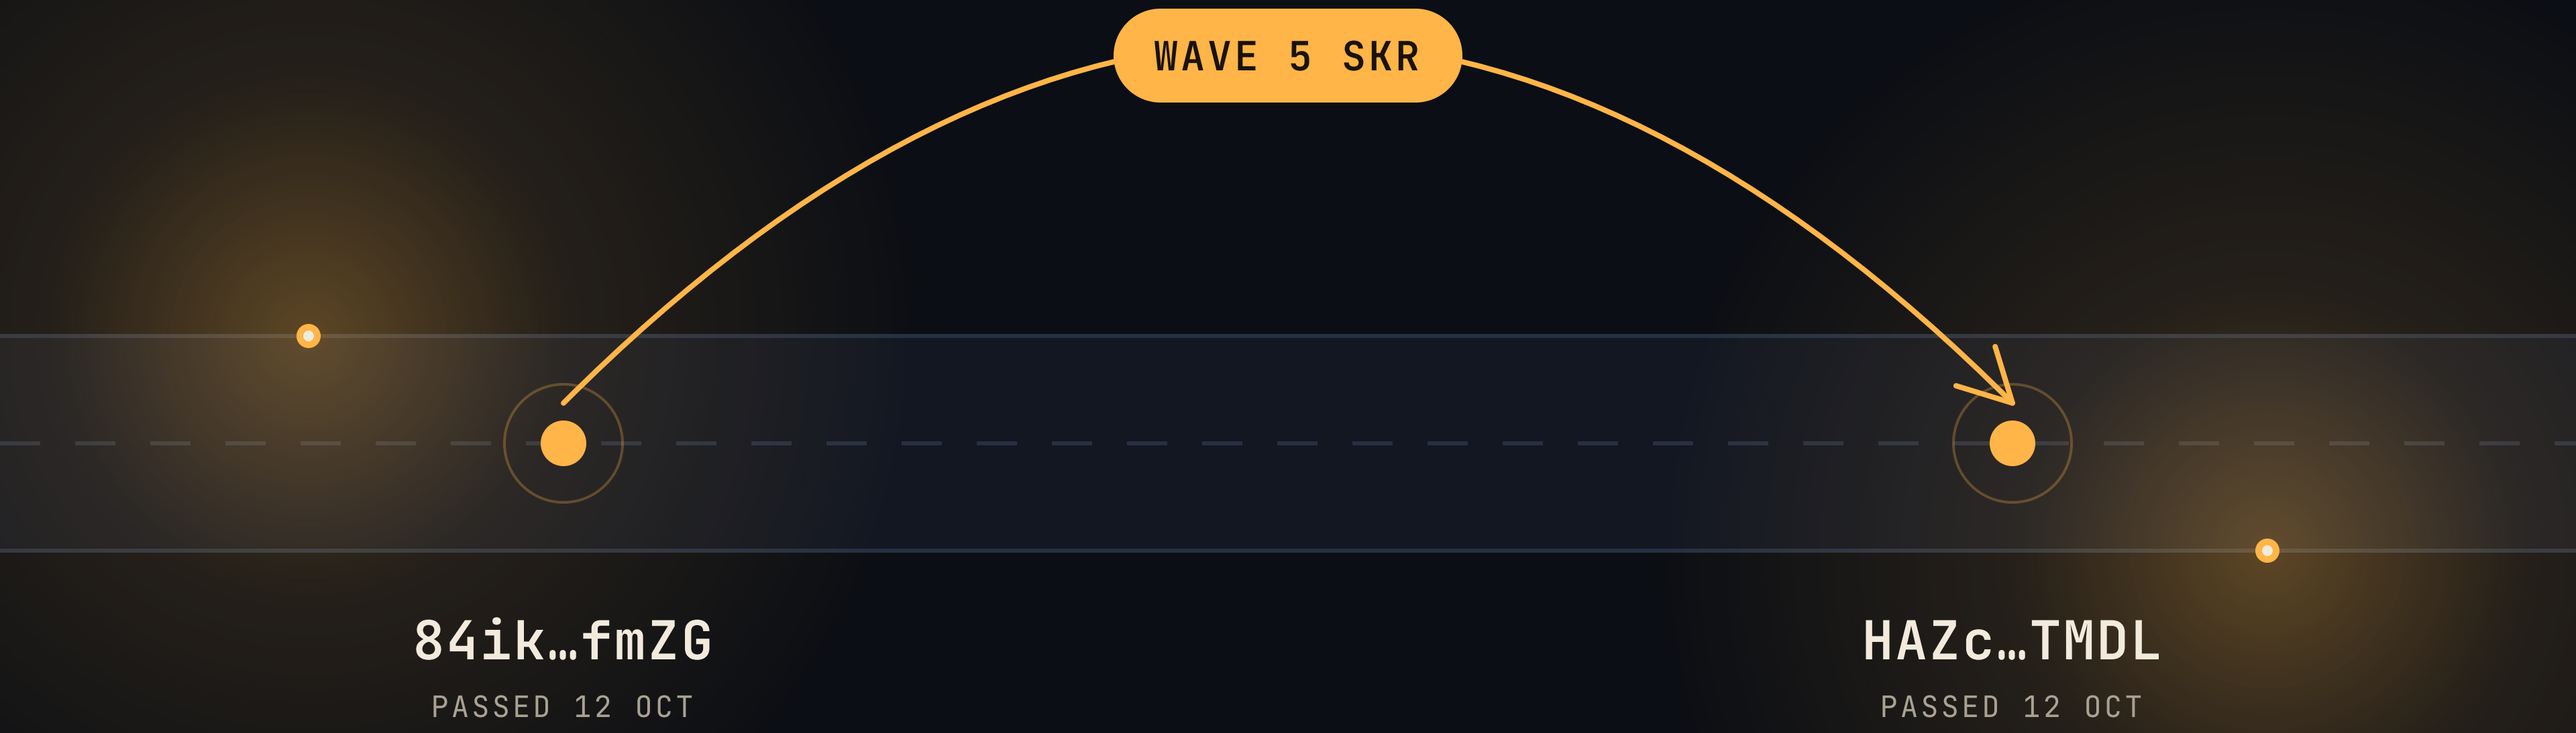

One per pair per day. Two phones, one stub each.

Wallets are free to make.

SEEKER VERIFIED

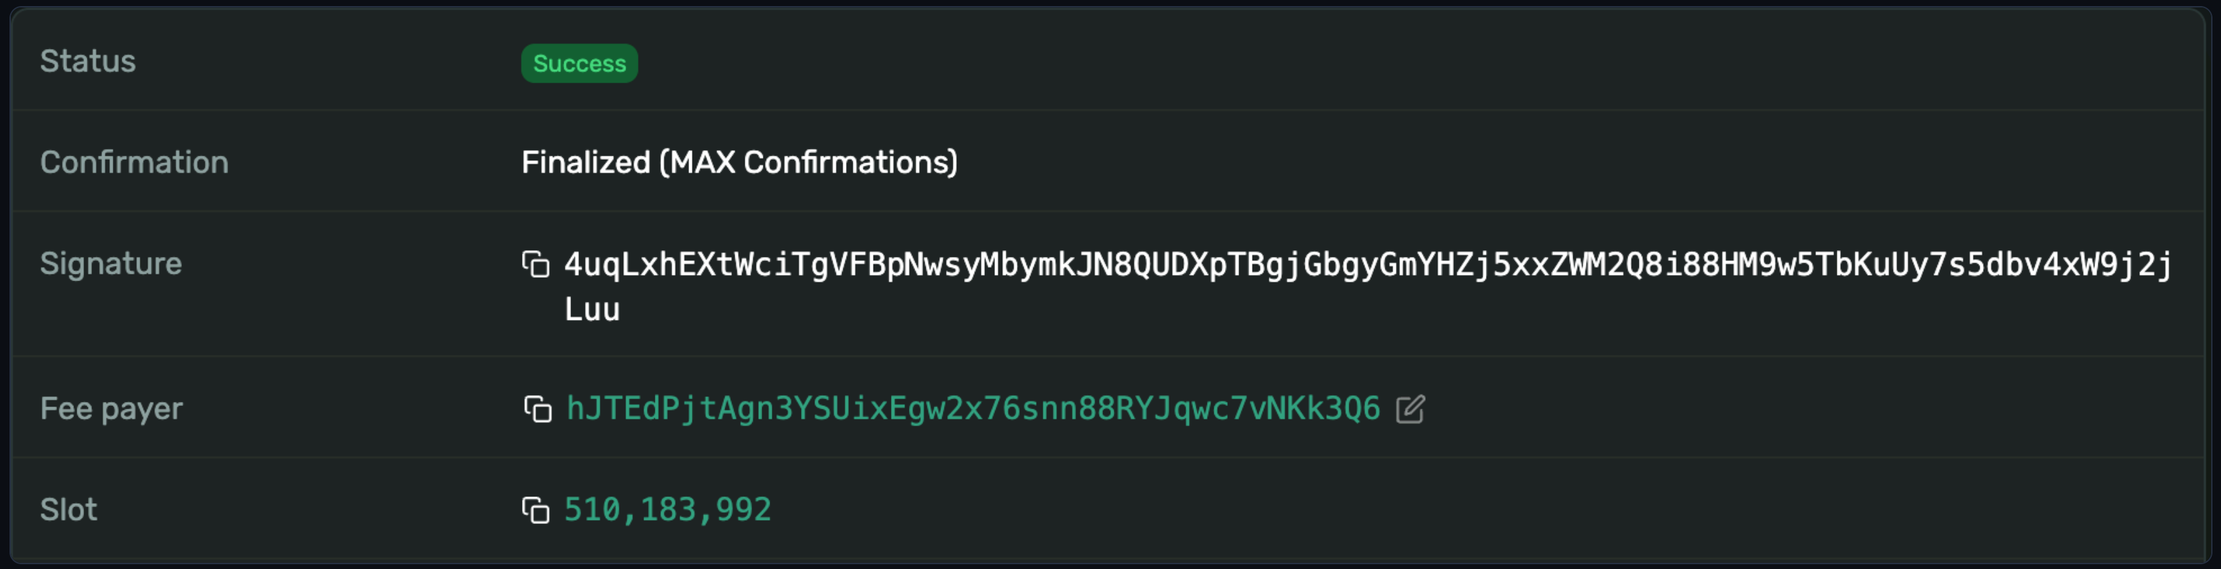

A Genesis Token is one device.

So a verified encounter is **two real phones in one place.**

SKR only flows to people you passed.

The program checks the signer is named on the encounter.

explorer.solana.com/tx/4uqLxhEXtWciTgVF…Uy7s5dbv4xW9j2jLuu?cluster=devnet

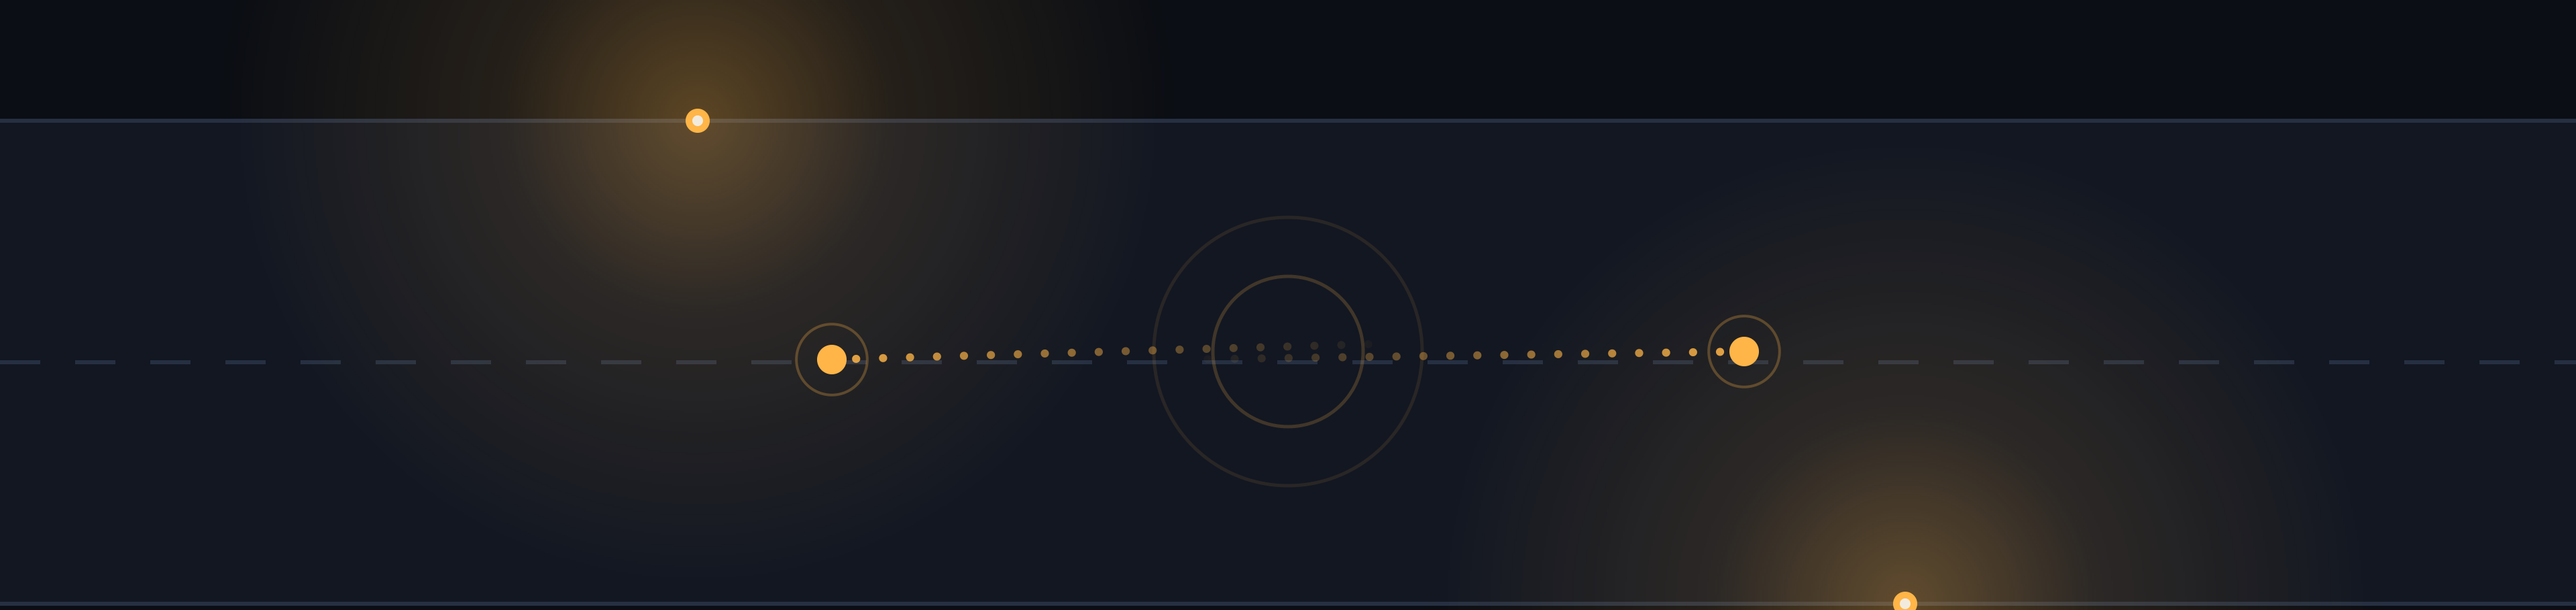

A real crossing, finalized on devnet.

PROGRAM

H15pvqJFh7isY3fMX4oZe2ezZ8xjM4RZmv2uemQhv1g2

17 program tests.
22 server tests.

Mutation-tested. Security-reviewed.

Every crossing counts.
